STRATEGICAL AND ENVIRONMENTAL GREENING

Everything starts to grow. This is the moment to start managing green spaces in a natural and circular way. This goes for private estates and public spaces.

Aftercare of new plantings :

Based on observations and measurements, we make a good estimate of the amount of water to be given and the frequency. The watering is monitored and adjusted if necessary. We give trees the opportunity to make roots through soil aeration, soil improvement, etc. By keeping an eye on the oxygen levels in the soil, we can make targeted adjustments if necessary.

Keeping your trees and soil vital :

soil analyzes provide us with a good picture of the composition and structure of the soil and its soil life. We draw up an action plan only making use of natural resources and proven techniques. In the beginning we often use specific composts depending on the situation of the soil life and the pH. Bacteria and fungi can be used as an addition, but this is not always necessary. Finally, adding minerals can be useful to restore soil balance. Diversity is important both above and below ground. No vital soil without adapted planting

Use of local organic materials :

Sometimes local organic materials can be used immediately, sometimes it takes a while before the soil life is ready. In any case, it is interesting to see what you can do with the local residual flows and how they can be used. It is very important to know what you do best in which season.

What is our approach :

- Our service can complement your activities
- We relieve you of the aftercare or work in addition to your activities.
- You will be kept informed of what is happening. Works resulting from our intervention come to you if you wish
- We can provide your maintenance team with tools for more sustainable garden care.
- A first visit can be carried out for a fixed price (€100 excl; VAT, including travel within 100 km of Sint-Job-in't-Goor.
- During this first visit you will get a good idea of the way of watering. We look at the soil structure and possible soil compaction. We check whether it is necessary to perform soil analyzes and take samples at once if necessary.
- Do you have multiple locations where we can go and have a look? Then we will gladly make a total price.
